Shahid Sorathia (Director)  
Dr. Y. S. Rao (Joint Director)

Product : Doctor at Home

Project: **Portable Smart Patient Monitoring System**

Panacea Meditech was established in the year 2011 by the promoters Bhavin Kamdar, Dhaval Shah and Shahid Sorathia at Innovation & Entrepreneurship Development Centre, Sardar Patel Institute Of Technology, Andheri(West), Mumbai.

The premier product of the company is the ‘Portable Smart Patient Monitoring System’. It is essentially like a “doctor at your home”. It provides a customized healthcare solution at low cost. It can measure temperature and ECG currently. The USP of the product is that instead of giving output in terms of complex waveforms, it analyses the medical data and gives output in terms that can be understood by everyone. It also features a SD card interface for data logging. It has a Bluetooth interface so the data can be transferred over to a mobile phone or other Bluetooth enabled devices. Hence it can provide remote healthcare monitoring and solutions also.

The unique selling point of the company is its exposure to cutting edge technology which can be implemented to increase the efficiency of the system.

This project was fully funded by Department of Science and Technology, Government of India, New Delhi.
