yours*

*Coz prevention is always
better than cure*

About the Product

The premier product of the company is the automated alcohol level detector. The product aims at reducing the number of drunken driving incidents by monitoring the breath alcohol level of the driver. The product is a portable, cost efficient, easy to use and more efficient device to measure Blood Alcohol Concentration (BAC) by analyzing the breath samples using a semiconductor sensor MQ303.

The user has to blow over the sensor and the product will detect the amount of

alcohol present in the breath of the user. Thus we can detect whether the user has consumed the permissible level of alcohol for driving.

The detector can then be embedded in automobiles, outside government offices and can also be used as a stand-alone device

Special Features

- ✓ **Accurate**
- ✓ **Quick**
- ✓ **Easy**
