Product: Smart Mobile Stun gun

Project: Combination of cellular phone having electro shocking device and remote alert system

Pramani Pvt. Ltd. was established in the year 2013-2014 by the promoters Ninad Jadhav, Manish Jain and Prajakta Ostwal at Innovation & Entrepreneurship Development Centre, Sardar Patel Institute Of Technology, Andheri(West),Mumbai.

The premier product of the company is the Smart Mobile Stun gun. Smart Mobile Stun Gun is a combination of mobile phone and Stun gun in a single unit. The basic idea behind the development of the product is to have a device for personal safety embedded with a commonly used entity which is mobile phone keeping in view the increase in the rate of crimes against women and other class of the people. Since mobile phone has become a very popular and common mode of communication and is now become the basic need of the people. The combination of both mobile phone and stun gun into a single unit will increase the level of personal safety and hence crime rate can be controlled. Moreover, the product is light-weight as the power source for both the mobile phone and the stun gun would be same i.e. The mobile phone's battery.

This project was fully funded by Department of Science and Technology, Government of India, New Delhi.
