Product: ToothCam

Project: Toothbrush with a camera that provides live video feed on portable devices.

OralView360 Pvt. Ltd. was established in the year 2014-2015 by the promoters Viraj Malia, Amogh Morye, Karan Shah, Kartik Chakole, Harshit Gandhi, Dr. Nikhil Vashi and Prof. K. T. Talele at Innovation & Entrepreneurship Development Centre, Sardar Patel Institute of Technology, Andheri (West), Mumbai.

Oral diseases are a major public health concern due to their high incidence rate and prevalence across the globe with the disadvantaged being affected more than most other socio-economic groups. Our product consists of a micro camera module on the toothbrush which will help the person examine their oral parts without damaging or hurting themselves. One can view their oral parts in live form on their portable devices including Android phones. The users will not hurt themselves accidentally due to clear oral vision. This provides an added advantage of the problems being treated at an early stage.

This product is developed at Innovation and Entrepreneurship Development Centre of Sardar Patel Institute of Technology, Andheri (West), Mumbai funded by Department of Science and Technology Government of India.
